

Project Objective /Components/Results	Results objective and indicators	Baseline	Midterm objective	Final objective	Assumption
information about the products quality.				testing laboratories are organized.	
	The standards and testing and measurement methods are necessary for compliance with MEPS/ HEPS.	Lack of full package of standards and testing methodologies for compliance with MEPS / HEPS groups of energy consuming products or energy consuming systems. Part of the existing standards and testing methodologies adopted on the national level of the individual EEU countries and are not used identically in the Project countries.	An analysis of existing standards and methodologies is conducted and recommendations on their actualization is developed, A plan for updating standards and developing missing methods is developed.	A package of standards and testing methodologies for compliance with MEPS / HEPS for certain group of energy consuming products and / or systems is developed and used by testing laboratories in the most EEU countries.	The indicator is evaluated not by the number of developed methods, but by their functional maintenance of testing procedures for compliance with the accepted MEPS / HEPS for certain groups of energy consuming products or energy consuming systems.
	Pilot programme for quality control and energy efficiency of appliances and equipment.	Control purchases of energy consuming products were not carried out, verification of the declared parameters of energy efficiency was not carried out. Unfair suppliers may offer low-quality products. There is unequal competition in the market, which restrain the introduction of energy efficient	Control purchases are carried out and samples of the most mass energy consuming products are tested. The results of testing are published in the professional publications and through mass media.	Plans for control purchases and testing of energy consuming products developed and submitted on the national level of the EEU countries.	The types of equipment and their quantity for the control purchases will be determined during the first year of the Project implementation period. The indicator is estimated not by the number of products tested, but by the degree of influence of objective information on market participants in the EEU countries and reduction of demand for low-quality products.
